

How can I stay safe?

Talk with your business about which of these control measures are appropriate for your situation.

If installed, filter air coming in by using the HVAC system

For environments where there are, or could be hazardous contaminants in the air, where installed:

- use an air recirculation filtering system as well as HVAC
- use a cabin pressure monitor

Keep doors and windows closed

- Do not smoke inside your cab. Wash your hands and face before eating
- If you can, park away from work areas, and wait inside your cab. Switch off your engine rather than leaving it to idle
- Clean the inside of your cab regularly
- Keep the outside of your cab clean

Keep your boots and personal clothing clean and dust free

Check door and window seals for splits or gaps
